EDUCATION

PES University

B.Tech in Computer Science and Engineering

Graduates 2027

CGPA : 9.23/10 · MRD Scholarship (Top 5%)

Kendriya Vidyalaya Hebbal

Class XII (CBSE): 91.4% · Class X (CBSE, 2021): 94.8%

2011 - 2023

EXPERIENCE

Software Developer Intern – FOR GOOD

June 2025 – July 2025

- Contributed to an Agentic AI platform that automated business processes and provided insights for e-commerce clients.
- Refactored technical debt-ridden code to rebuild the in-app chat application, delivering a highly optimized user experience.
- Slashed API response latency from 10–20 seconds down to sub-second speeds (< 1s), enhancing system reliability.
- Developed features within an Agile workflow, writing clean, modular, and self-sustaining code.

Teaching Assistant – Machine Learning

August 2026 – Present

- Guiding students through core ML concepts and practical code implementations.

SKILLS & CERTIFICATIONS

Languages: Python, C, C++, Java, SQL, JavaScript, TypeScript

Databases & Tools: SQLite, Kafka, Redis, MySQL, MongoDB, Docker

Frameworks & Libraries: React, NextJS, Express, Pandas, NumPy

Certifications: Deep Learning Specialization, React Basics

PROJECTS

NaturalShell : Context-Aware AI CLI | Python, ChromaDB

- Engineered a framework-free CLI tool featuring a custom ReAct agent loop to translate natural language intents into context-aware shell commands.
- Implemented a local RAG pipeline with ChromaDB for shell history retrieval and integrated an OS context injector to ensure safe, grounded execution.

QuickByte : Food Delivery platform | NextJS, JS, Express, MySQL

- Built custom front-end and back-end services, orchestrating RESTful APIs across user, restaurant, and driver interfaces.
- Designed optimized MySQL schemas for real-time order state management and implemented secure authentication protocols.

Maaya : High-Traffic Event Management Platform | NextJS, Express, SQLite

- Engineered a live university fest platform, integrating third-party products (Razorpay) for secure ticketing for 2,000+ active customers.
- Optimized asset rendering and executed real-time troubleshooting and bug fixes during active deployments to ensure zero-downtime.

Psh : A POSIX-like Compliant Shell | C

- Engineered a POSIX-compliant shell with built-in commands and external executable support via system PATH.
- Integrated process management and tab-autocomplete by directly interfacing with low-level OS system calls.

KafFlow : Dynamic Kafka Governance and Orchestration | Python, SQLite, Kafka

- Built a governed Kafka ecosystem using Python and FastAPI with an admin-approval workflow for dynamic topic creation.
- Optimized non-blocking data ingestion via a multi-threaded producer and centralized SQLite state-management.

LEADERSHIP & ACHIEVEMENTS

Chair – IEEE Student Branch, PES University

2025 – 2026

- Spearheaded technical initiatives and 2 large-scale hackathons (250+ participants), driving student engagement and cross-team collaboration.
- Git Workshop Instructor:** Mentored students on version control fundamentals, focusing on clean PR workflows and maintainability.

Key Achievements

- 2nd Place, Ingenious Hackathon:** Built a C/Python AST parser to automatically insert `free()` calls to prevent memory leaks in legacy codebases.
